

**Raising the
kids who will
build the future.
A future we
can not
yet see.**

TokyLabs Hackathon - Bali 2026

65%

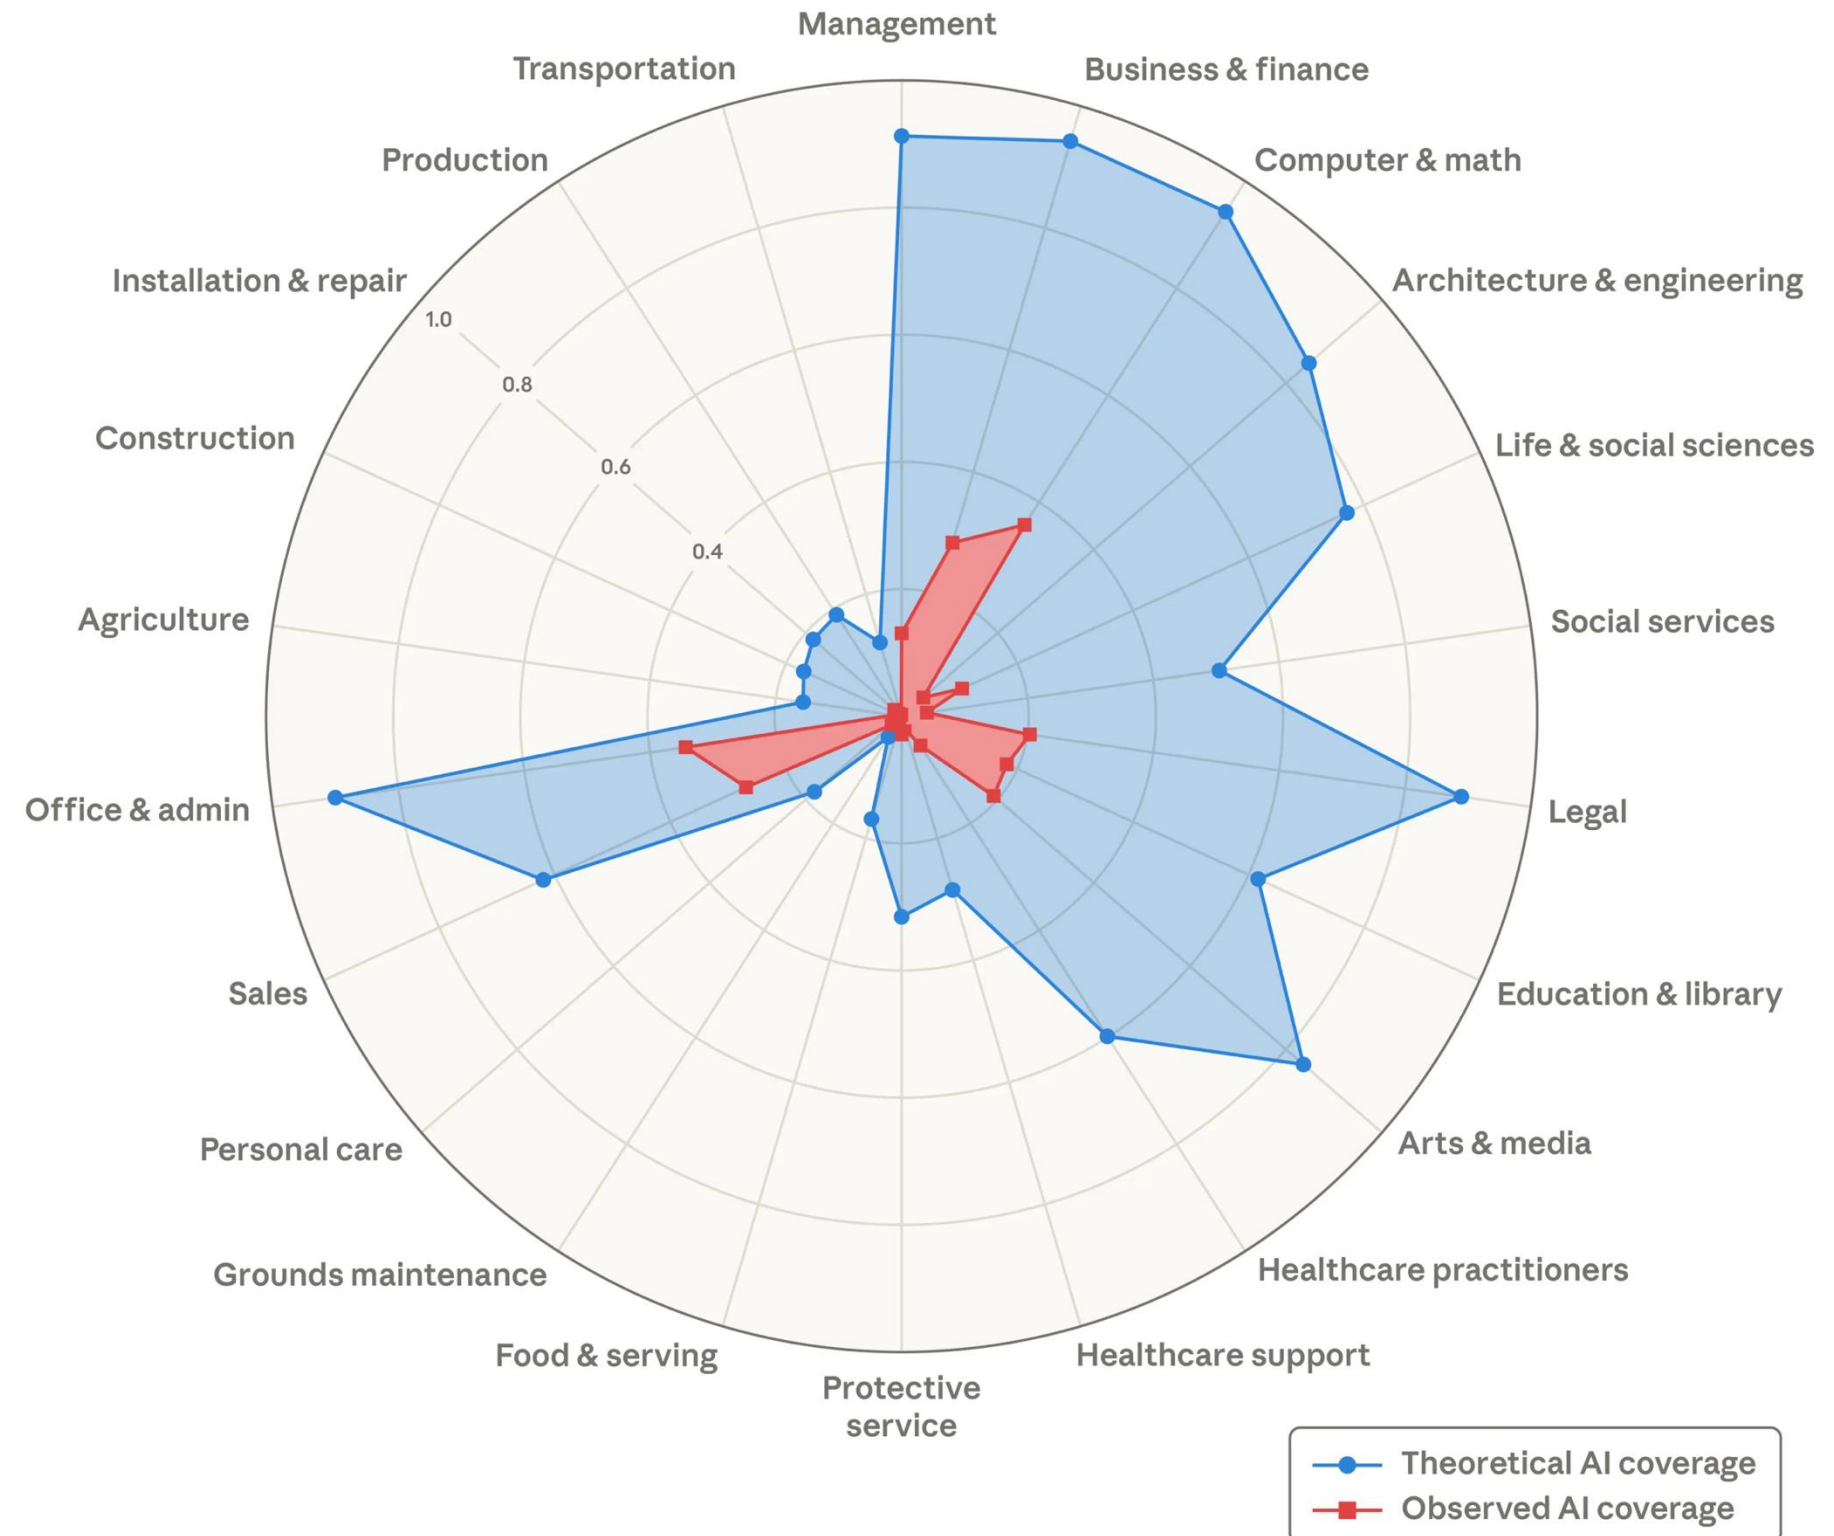

of today's children will work in jobs that don't yet exist. We cannot prepare them with subjects. Subjects describe a world we already know.

The machines have already caught up.

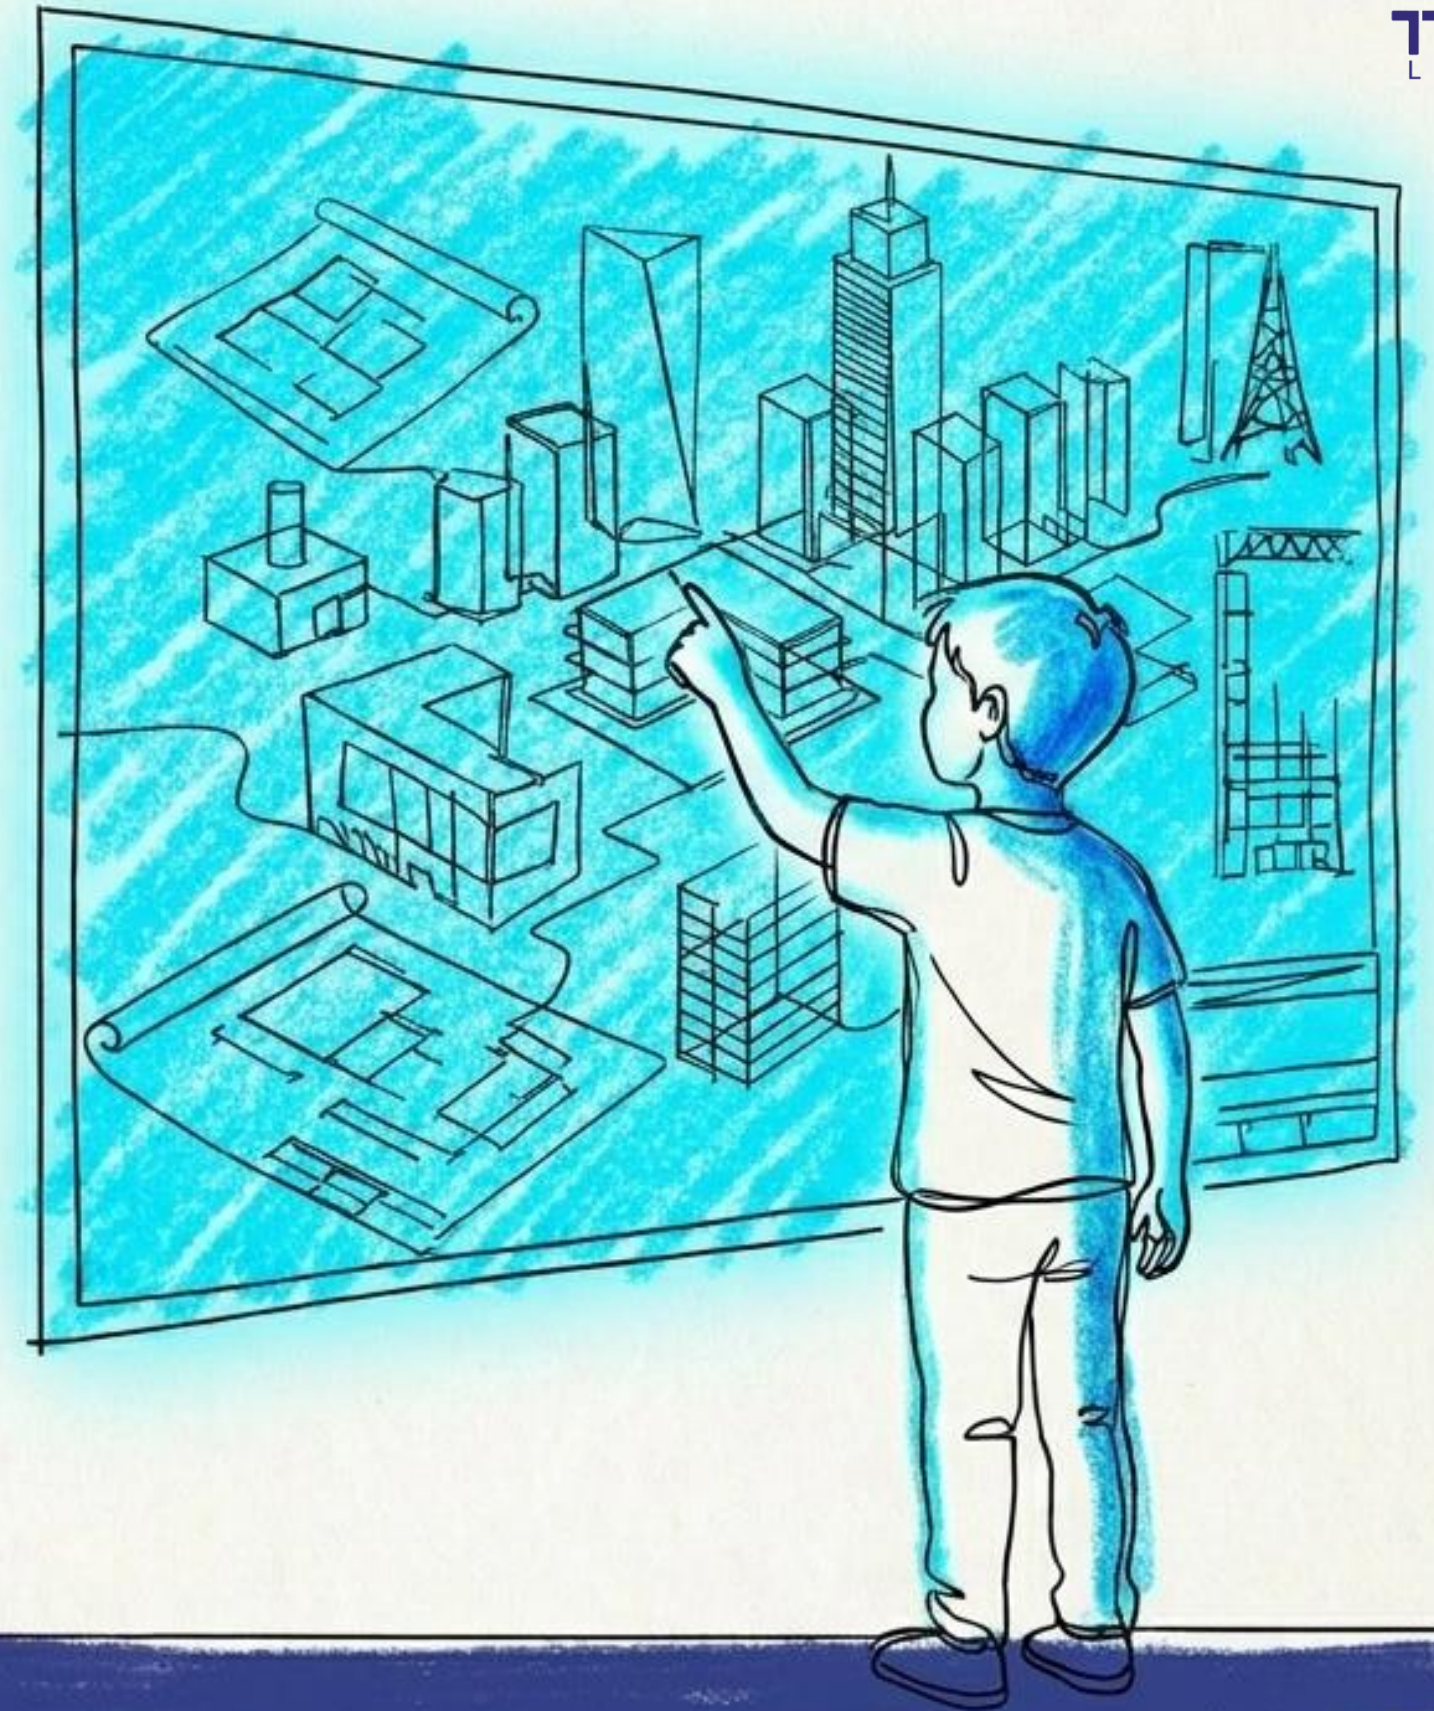

AI is currently **writing code** as well as your mid-level engineer. Anthropic capabilities study.

Theoretical capability and observed usage by occupational category

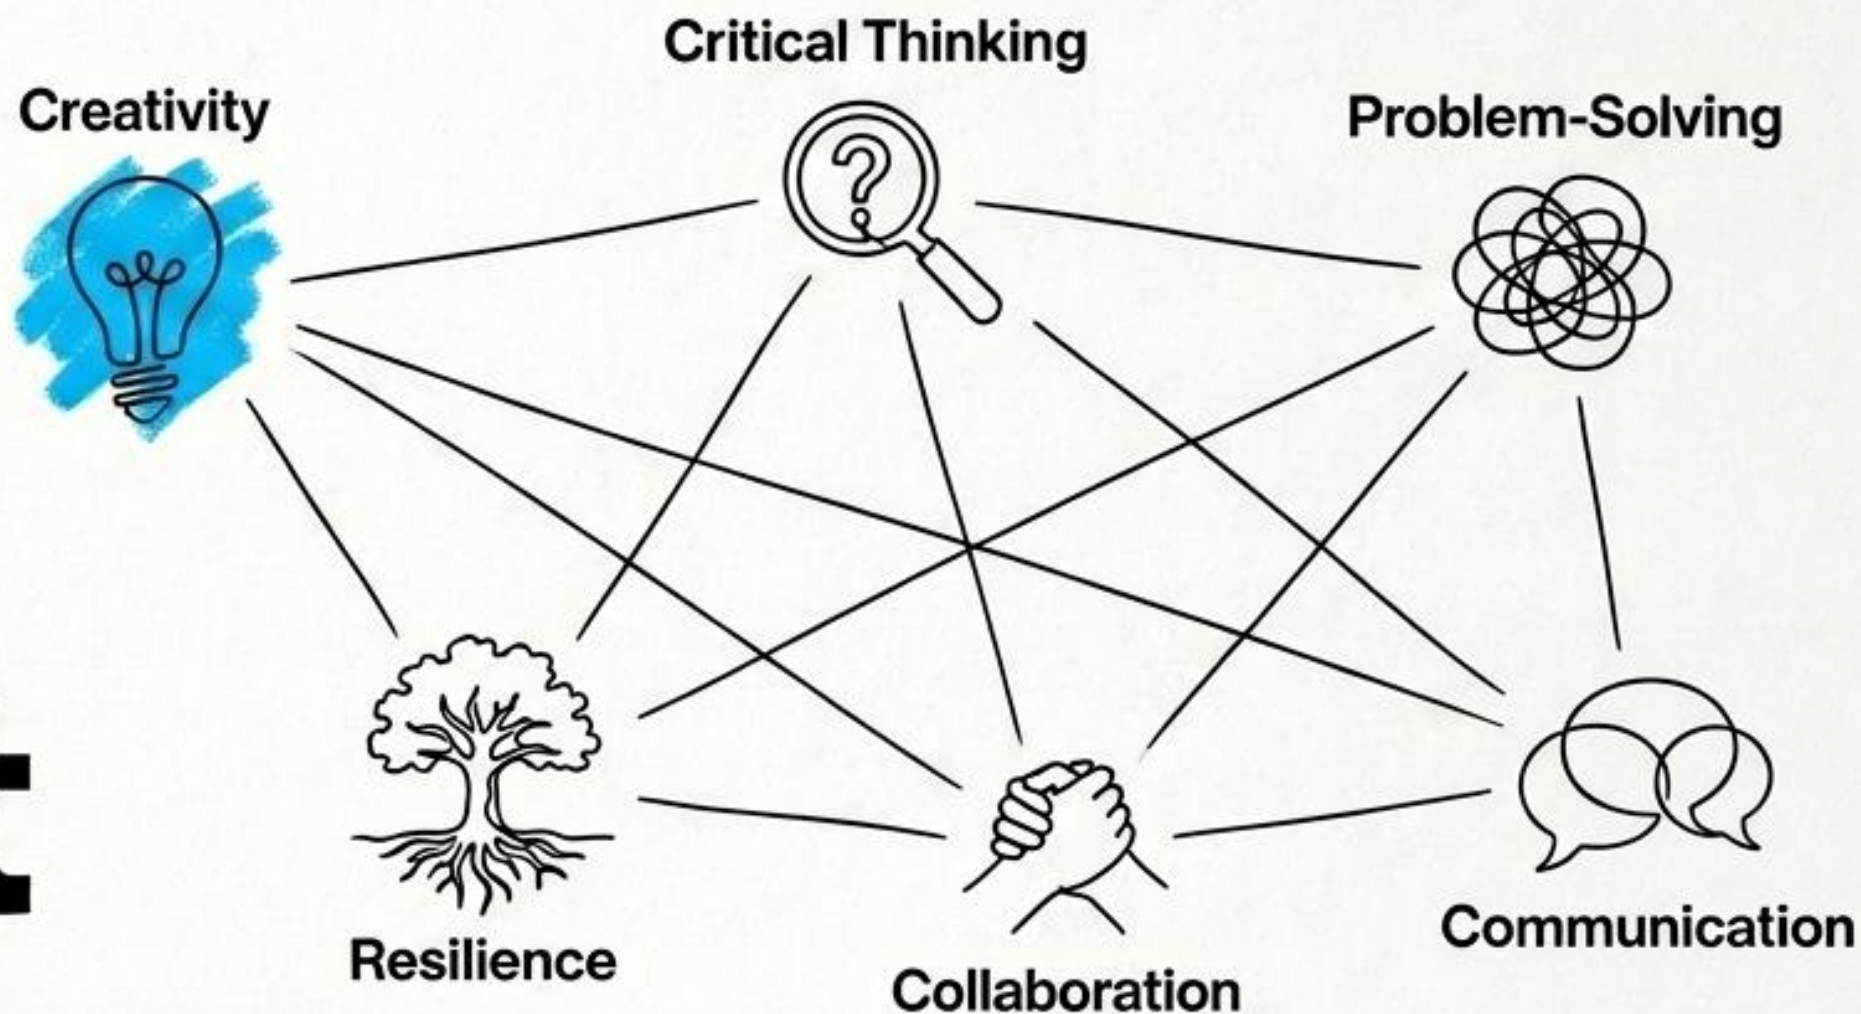

Coders follow instructions. Architects write them.

Stop raising workers. Start raising the people who decide what is worth building.

The six skills that travel to any future.

Inevitably Human

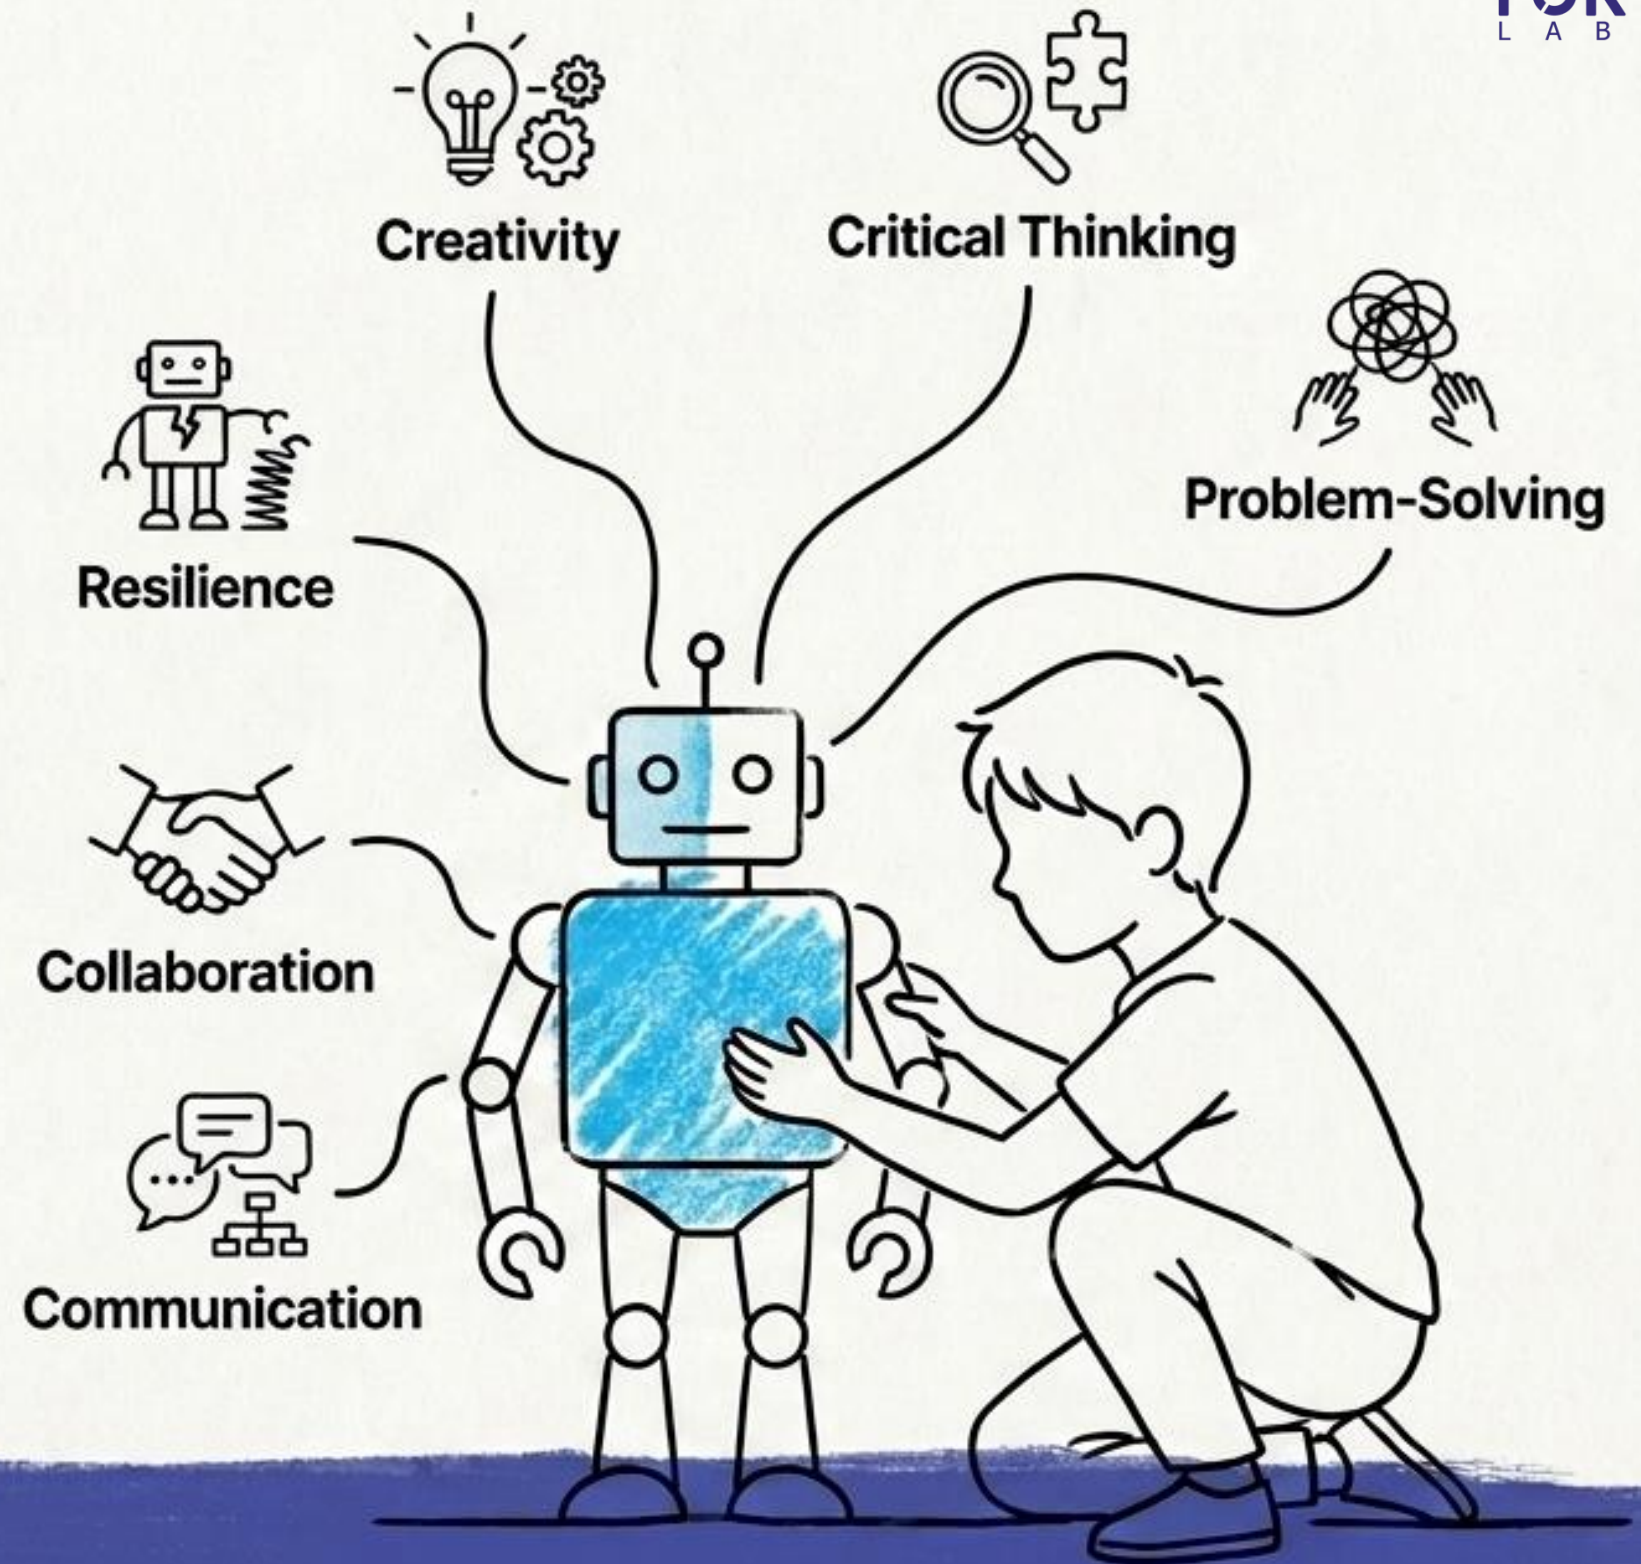

Two robotics classes.
Two different methodologies.
Two completely different kids.
It is not WHAT we teach. It is HOW.

STEAM - Robotics.

A framework for all six skills.

Building a real, working, physical thing is the ultimate playground for human development.

The structural shift that turns activity into transfer.

Rows of Desks
Rigid Lessons
Standardized Tests

The TokyLabs 5 Shifts

Age-Appropriate Fit

Question-Asker

Collaborative Workshop

Passion Projects

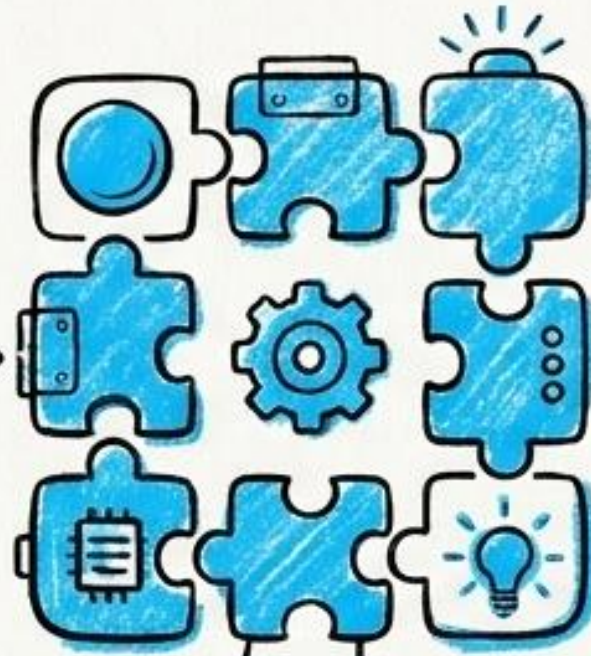

Built Portfolios

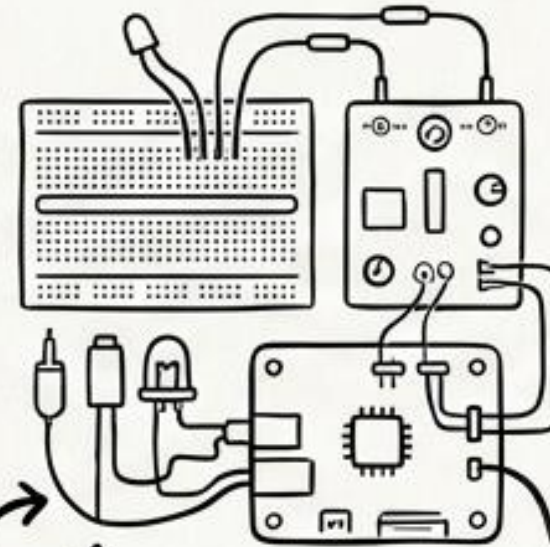

Shift 1: The right tool at the right age.

Tools that speak
the language the
child's body
already speaks.

Age 6-9

Age 10-12

Age 13+

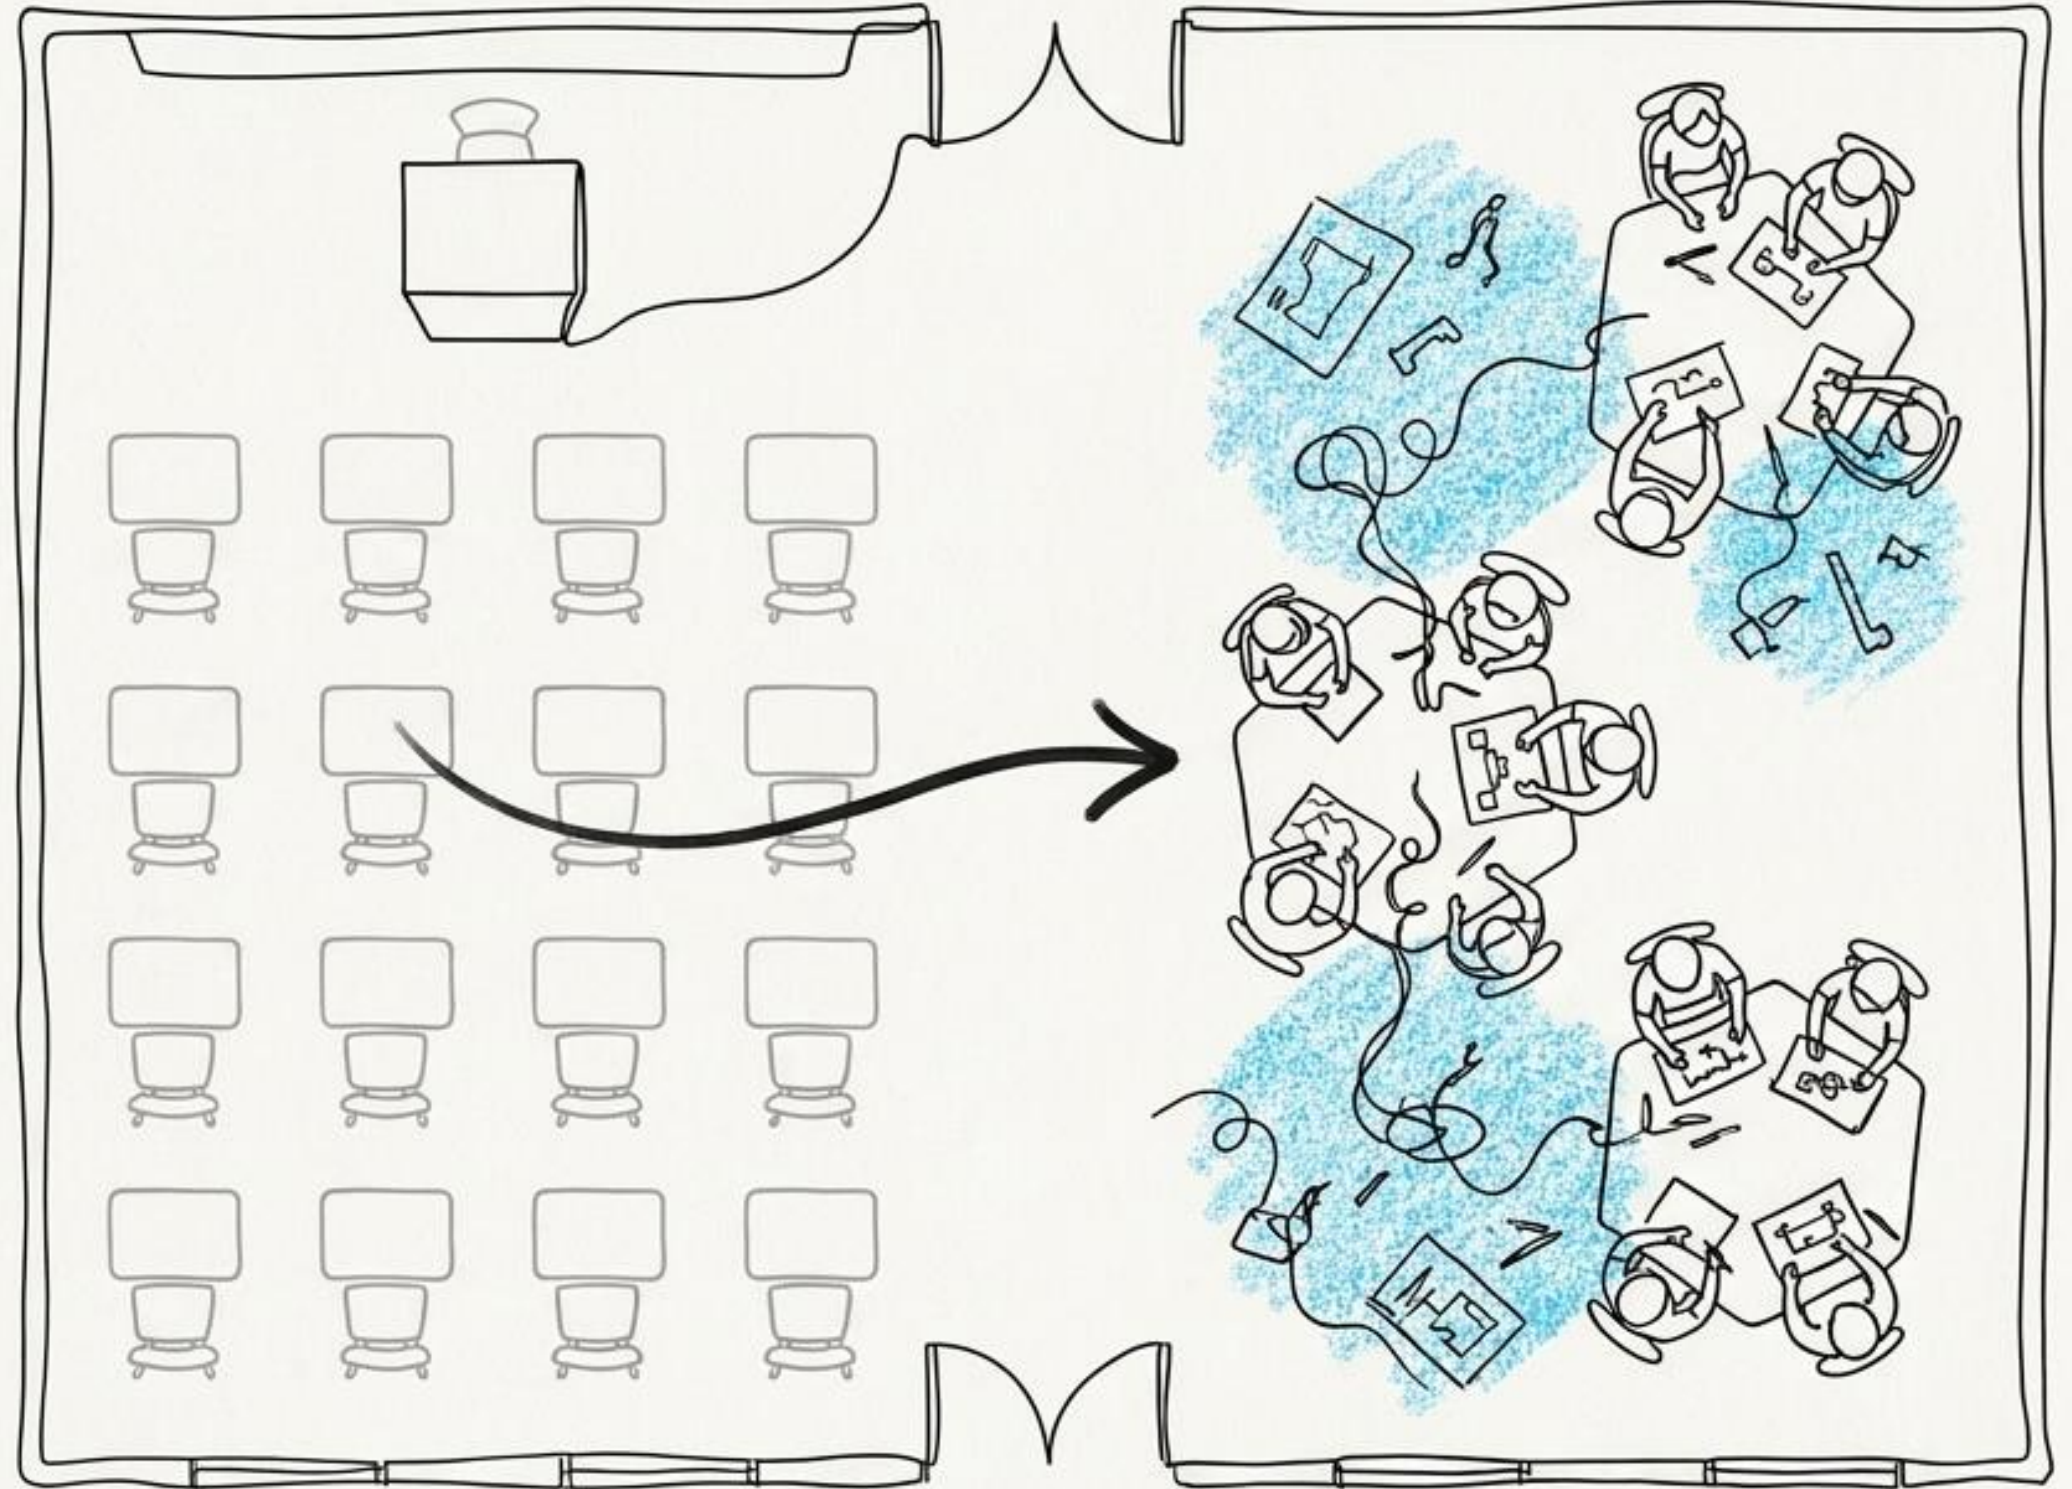

Shift 2: From the one with the answers, to the one with the questions.

Socratic dialogue forces the child to exercise Critical Thinking and Communication simultaneously.

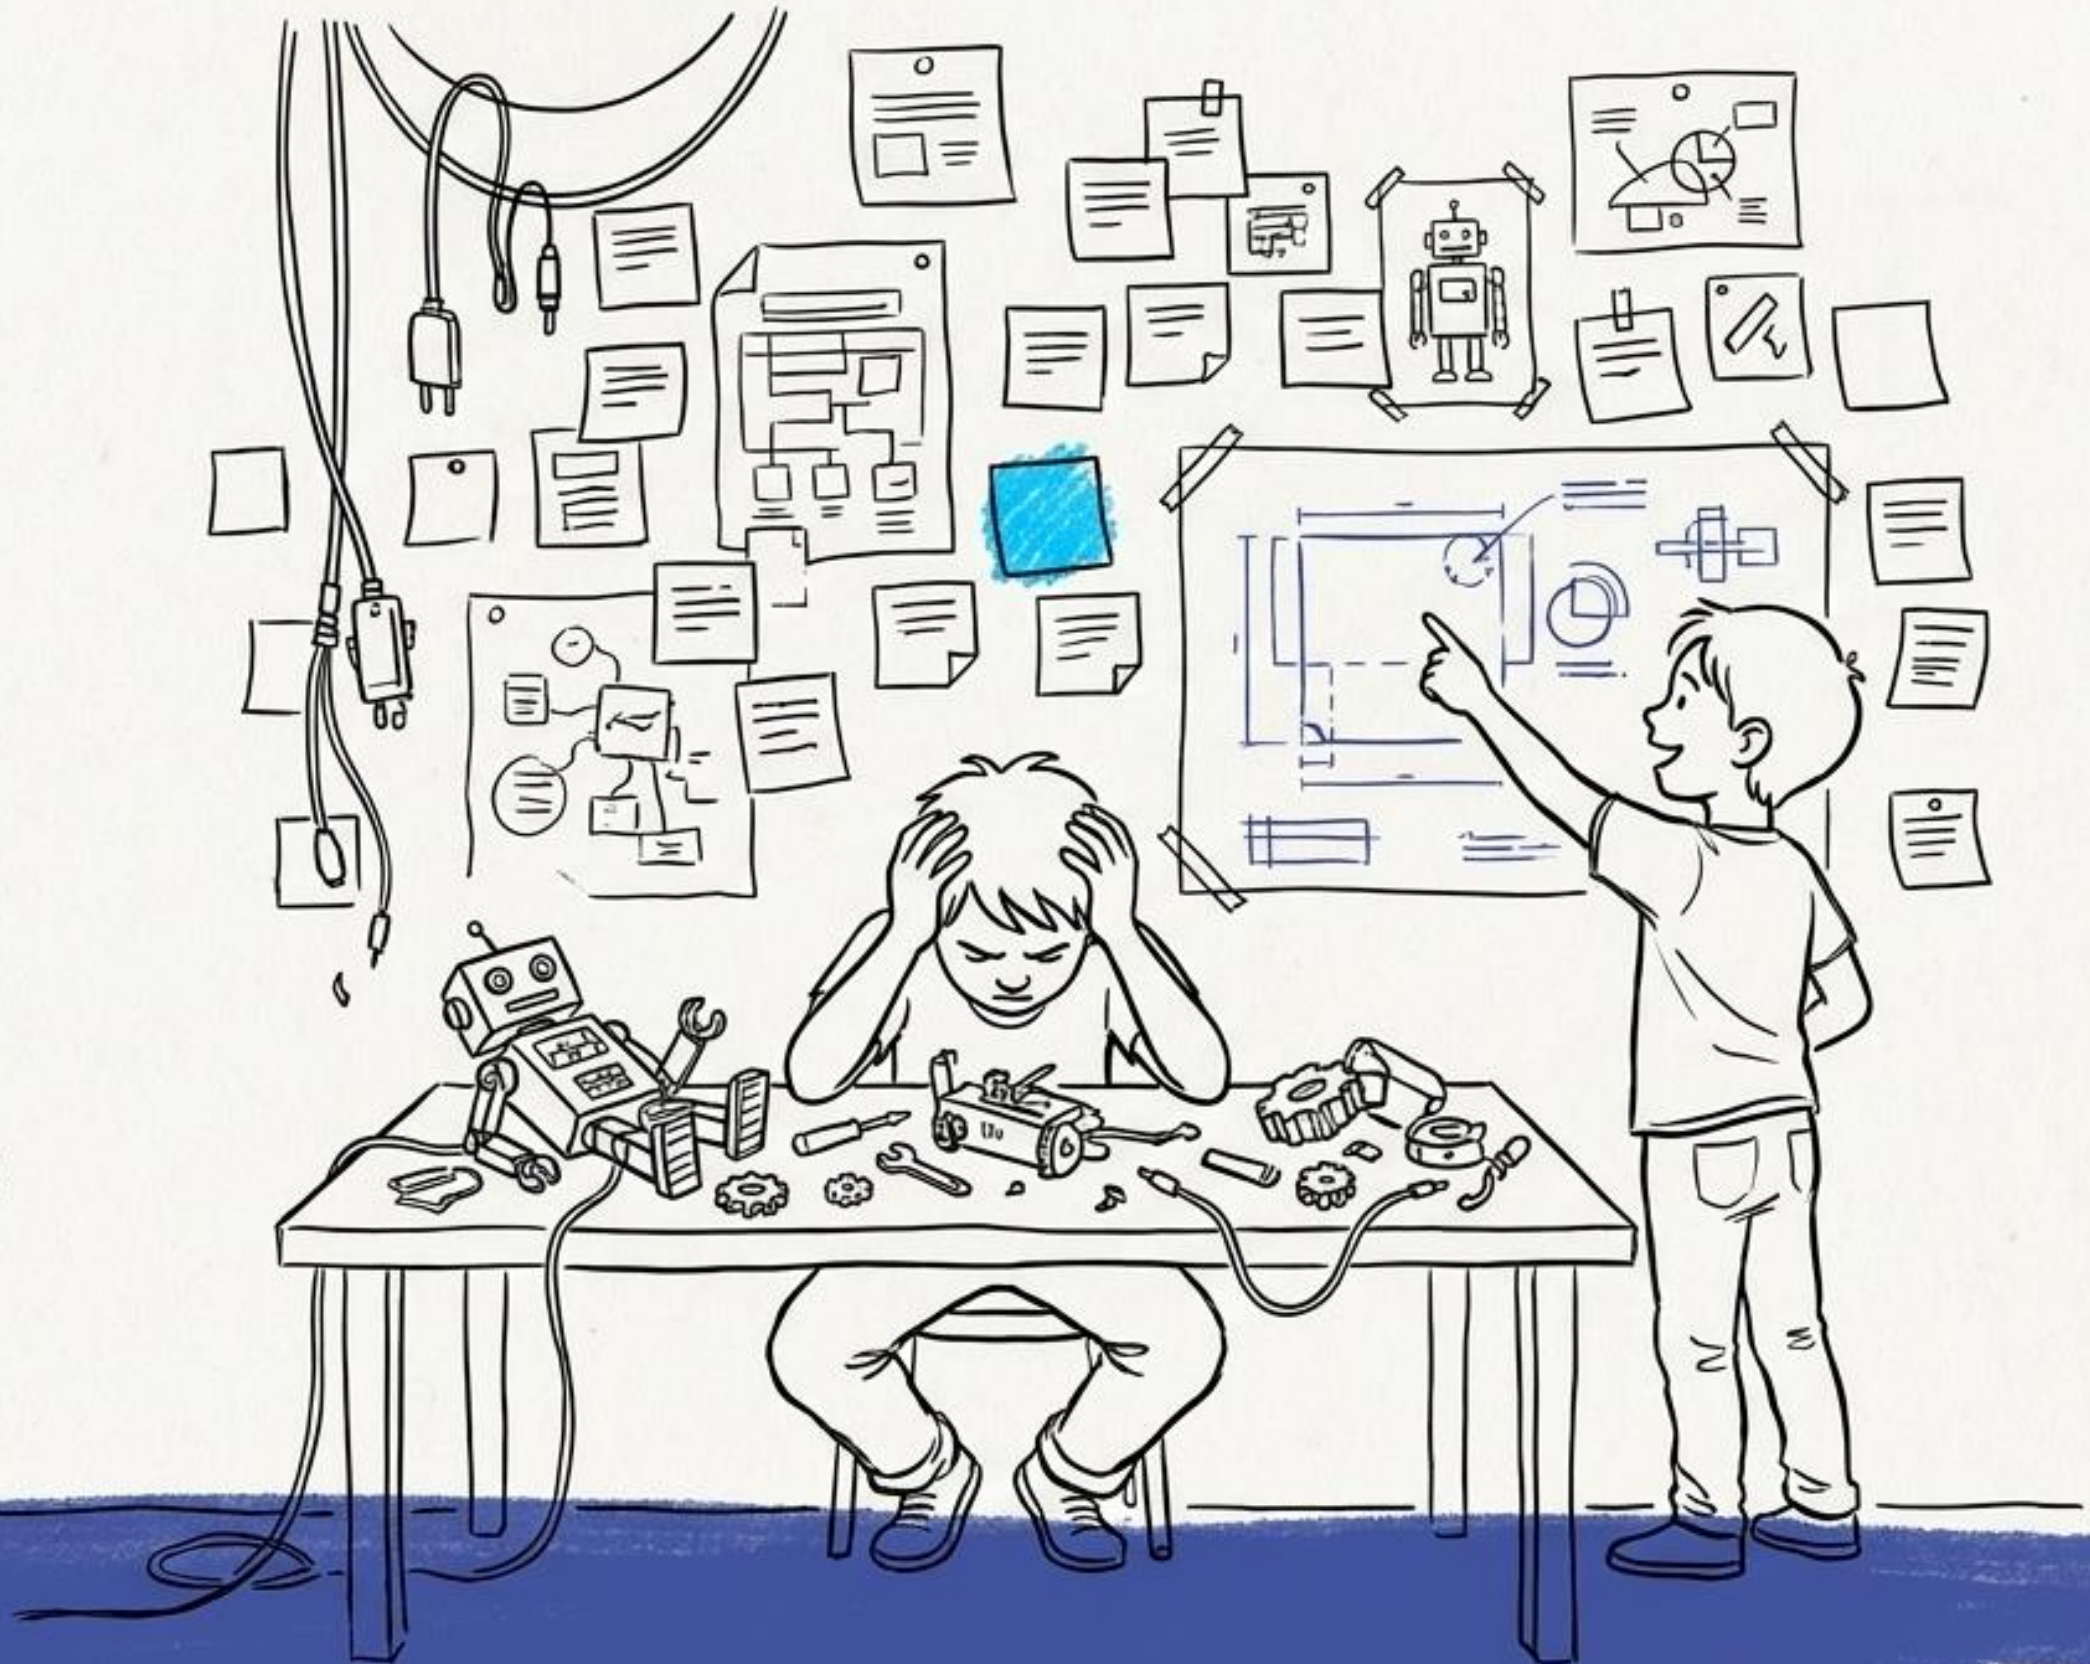

Shift 3: From a teacher-centered classroom to a student-centered workshop.

Having hands on something at all times grows Independence and Collaboration.

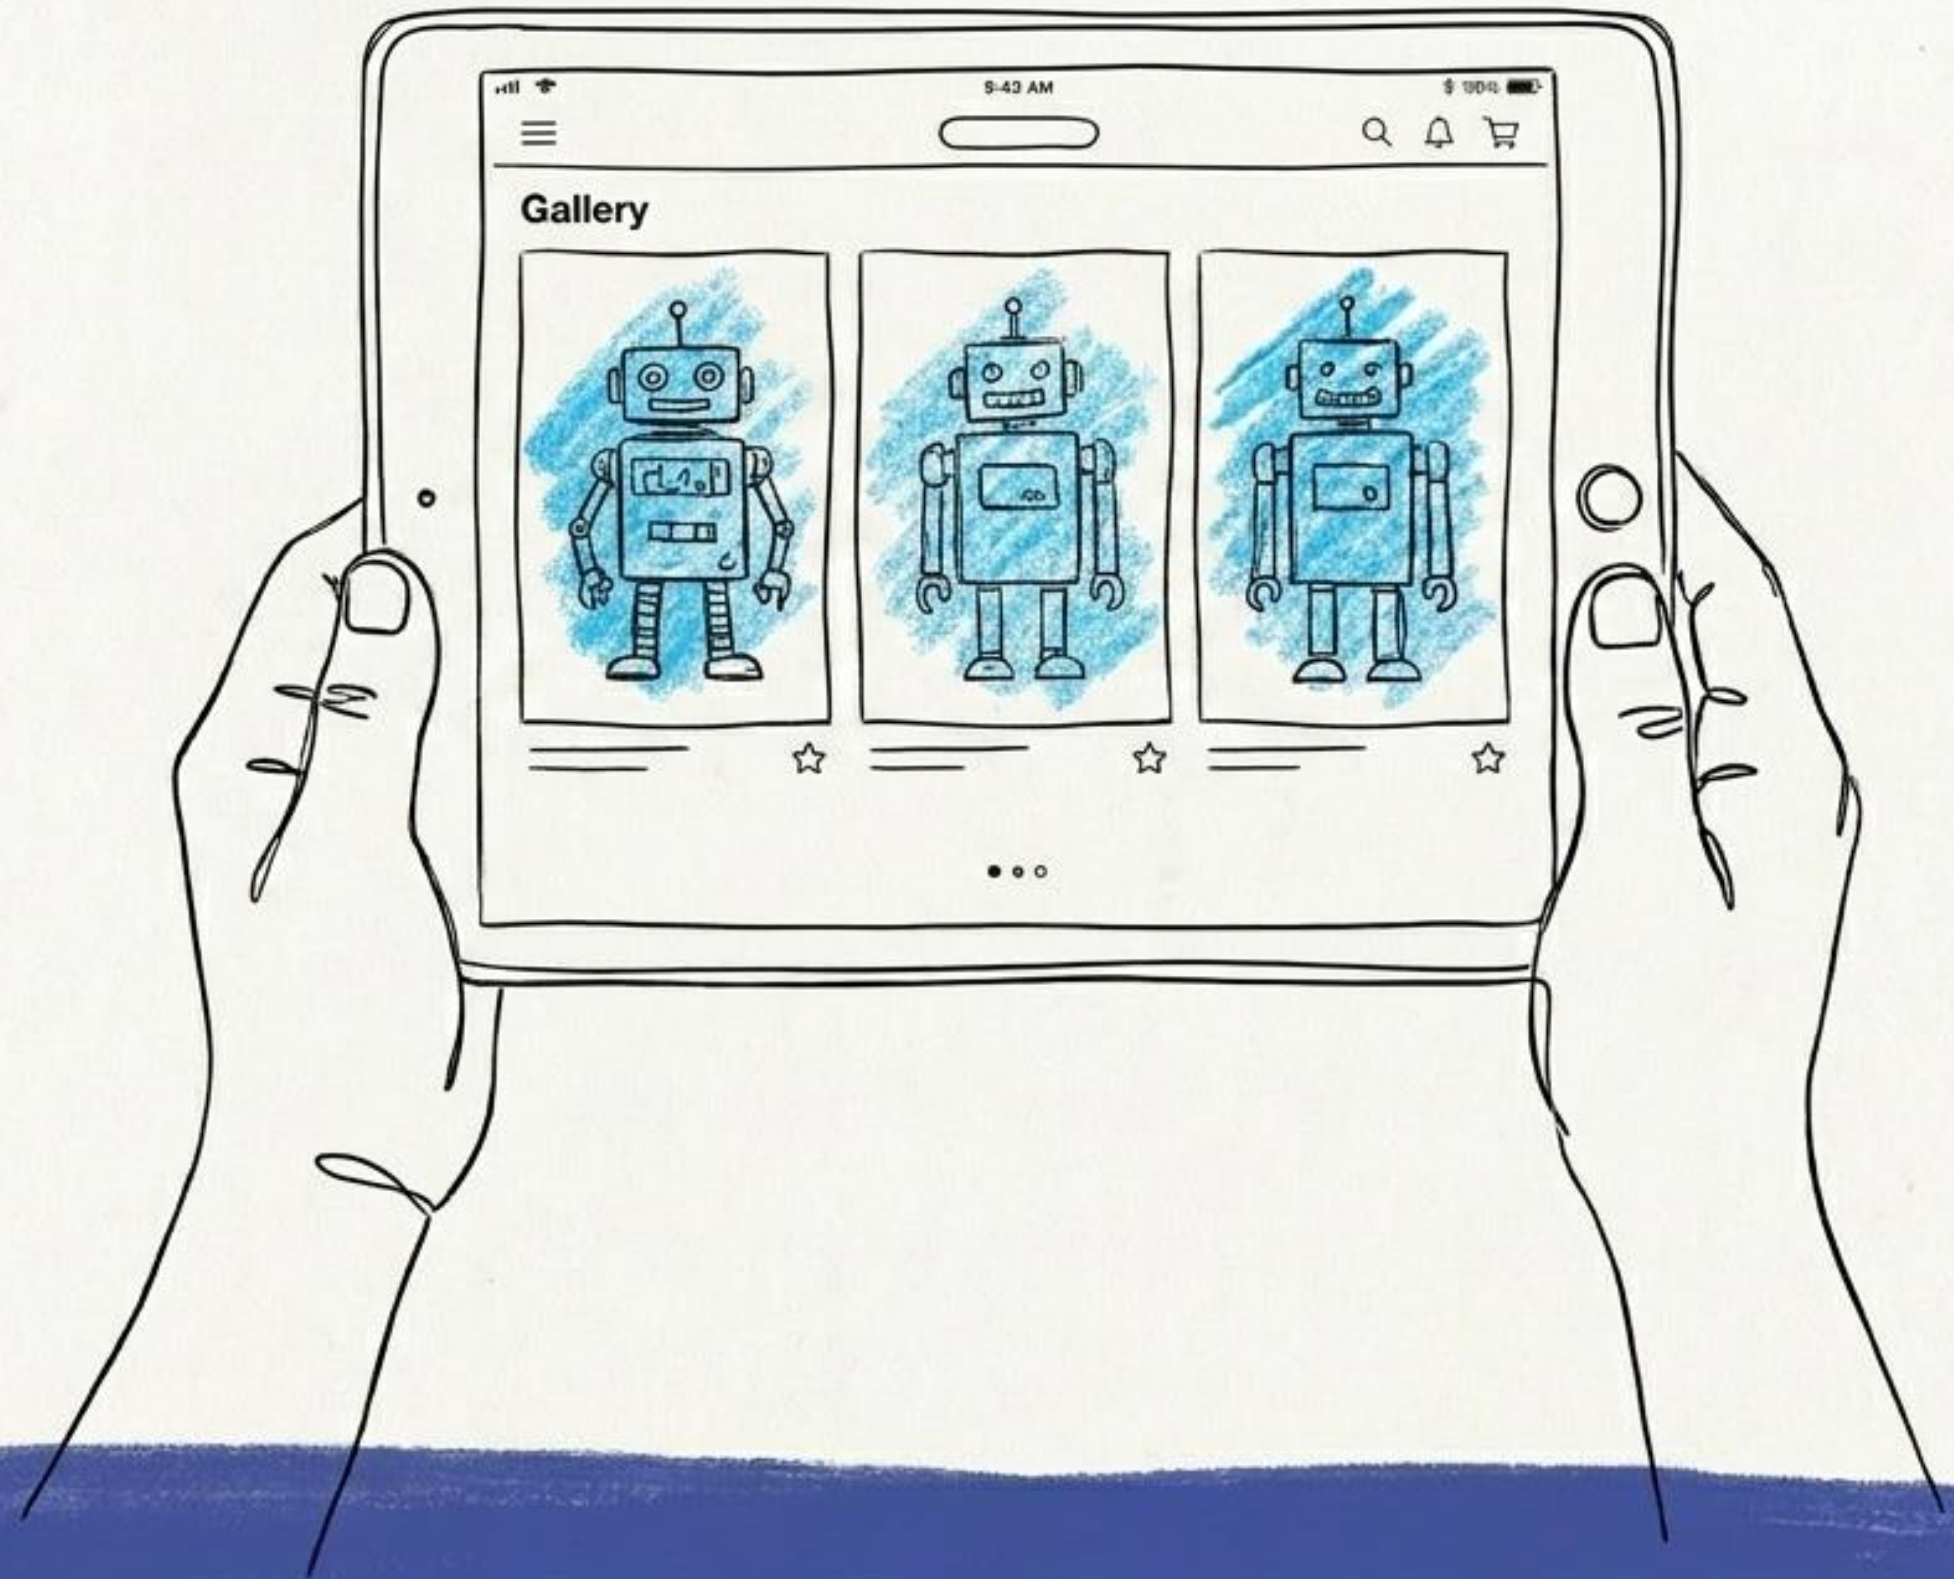

Shift 4: From a sequence of lessons to a sequence of projects.

Project-based learning is the
engine for Problem-Solving,
Resilience, and Creativity.

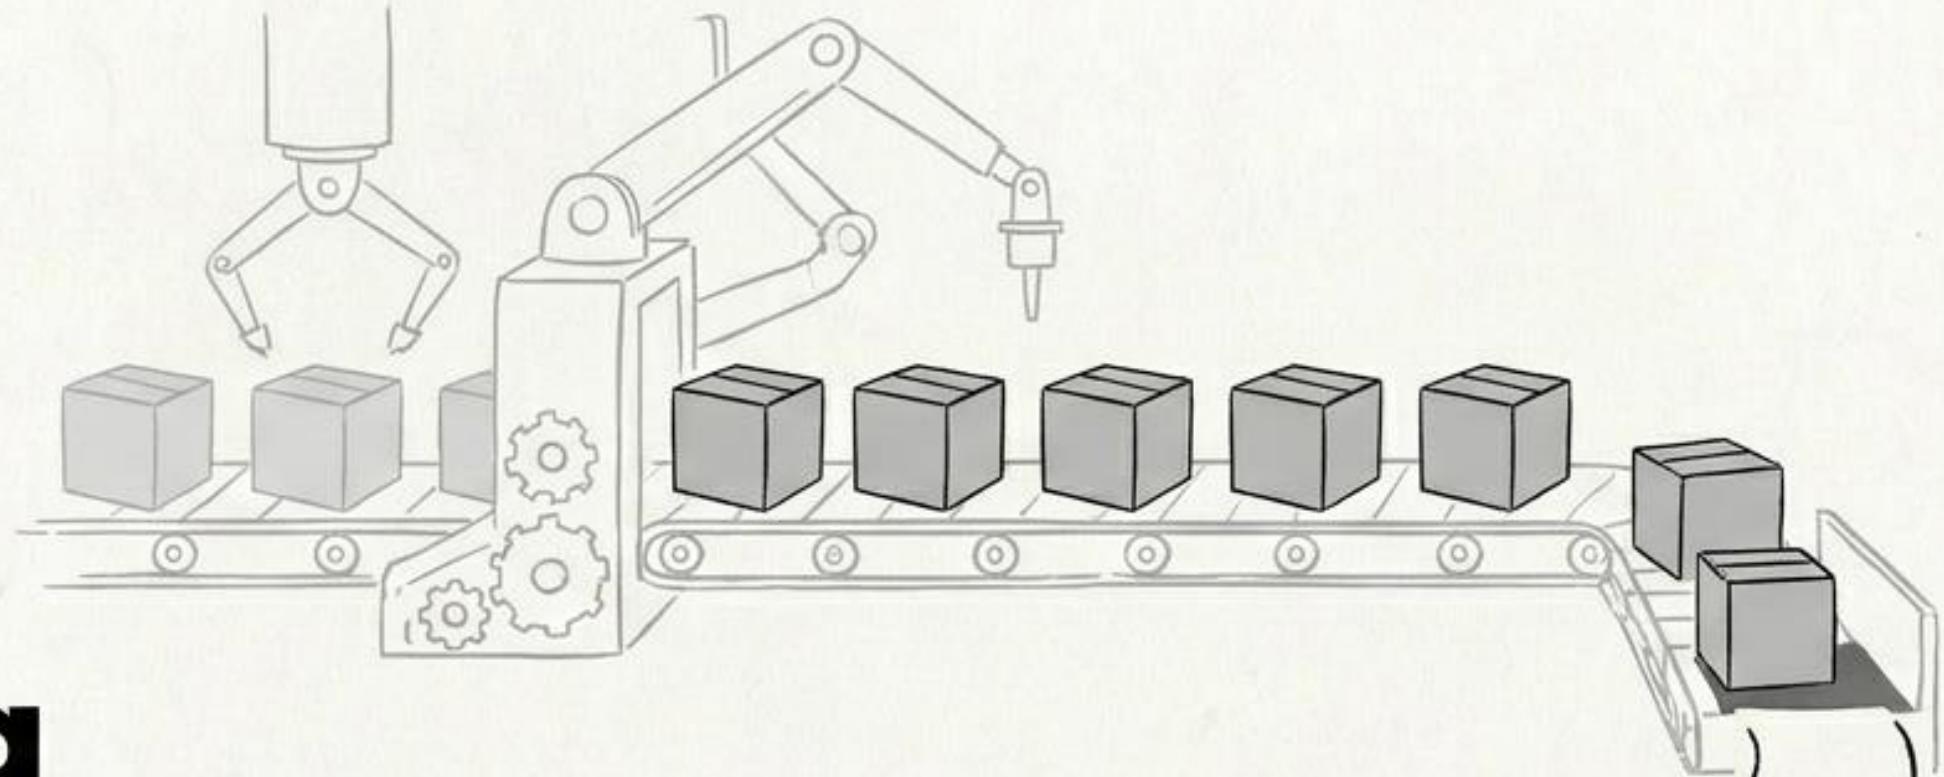

Shift 5: The proof is in the prototype.

From a test that asks
“did you remember?” to
a portfolio that asks
“what did you build?”

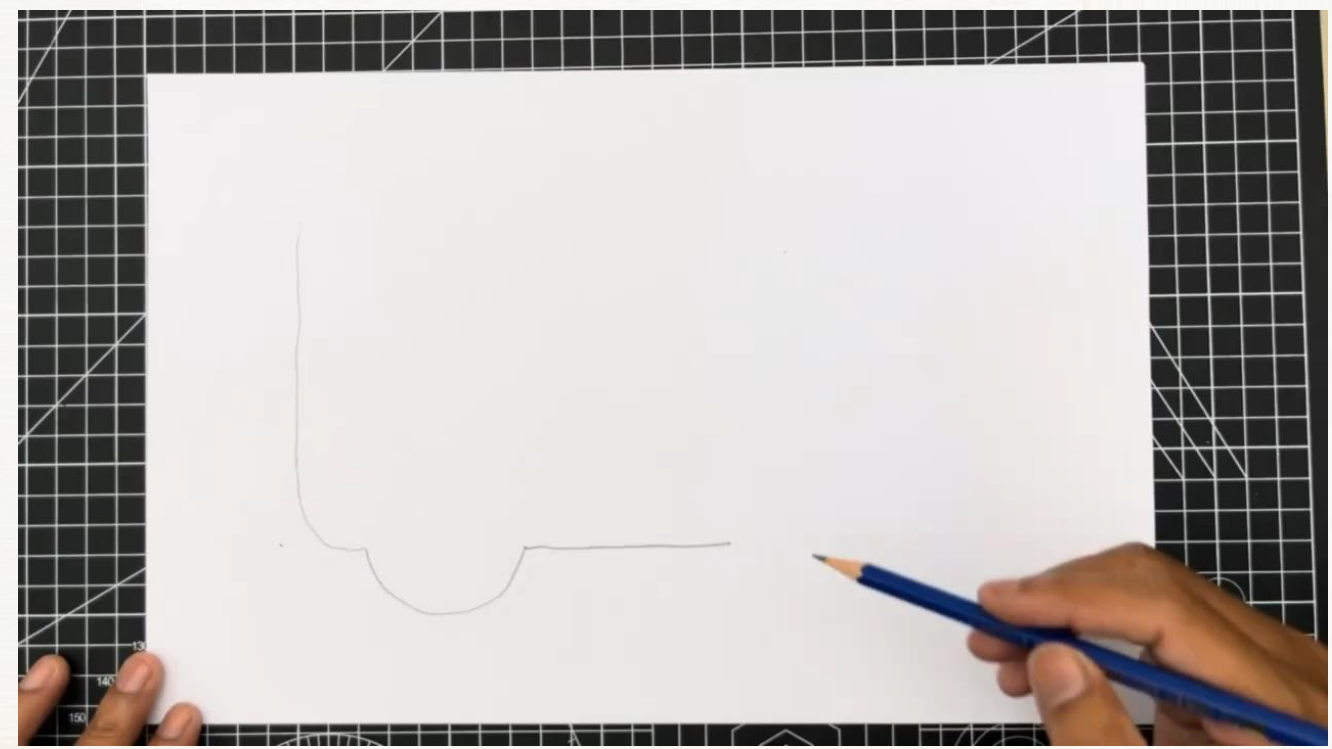

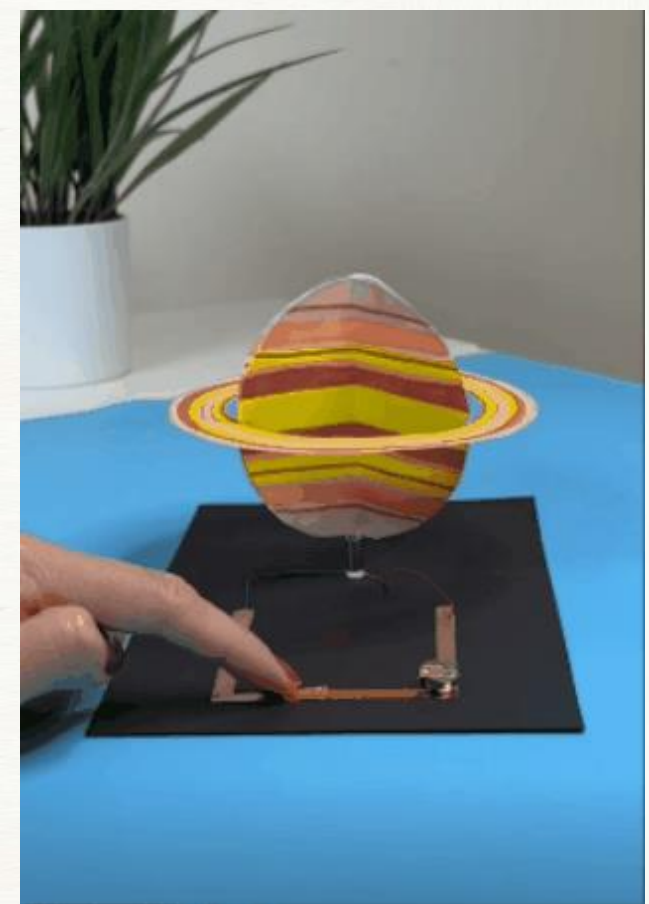

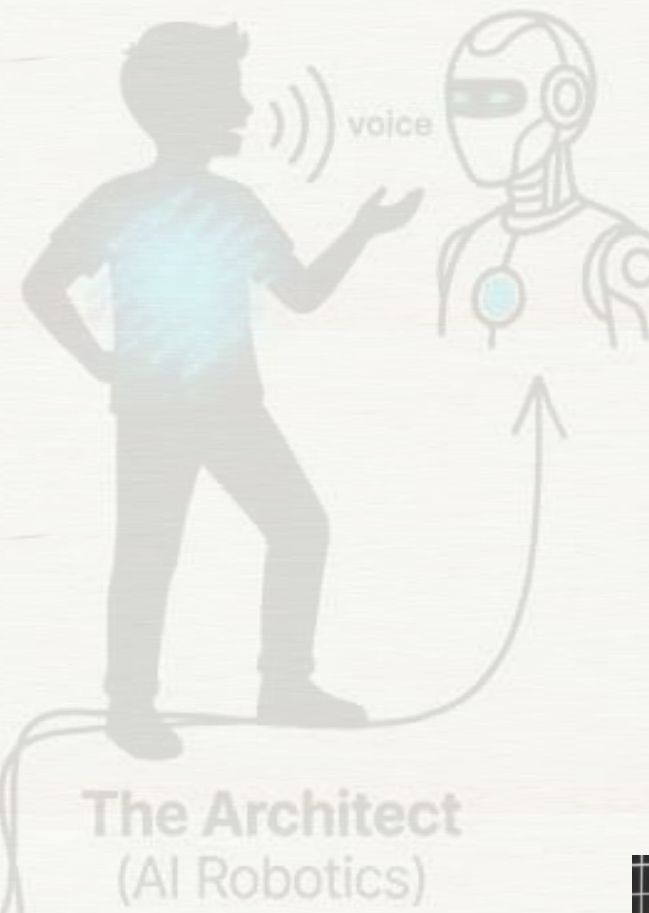

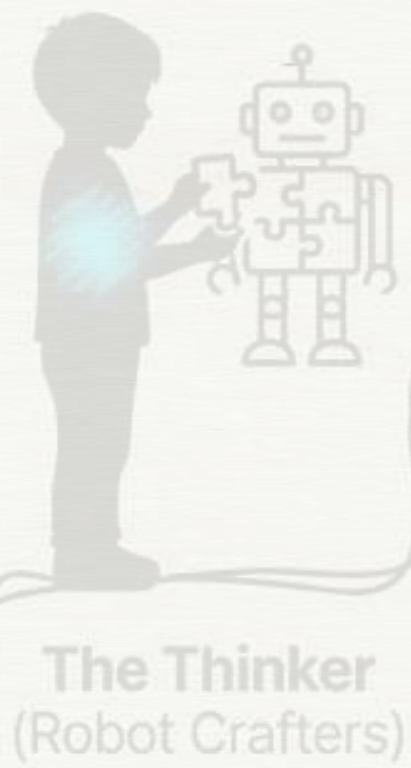

Education is not a factory. Stop manufacturing identical children.

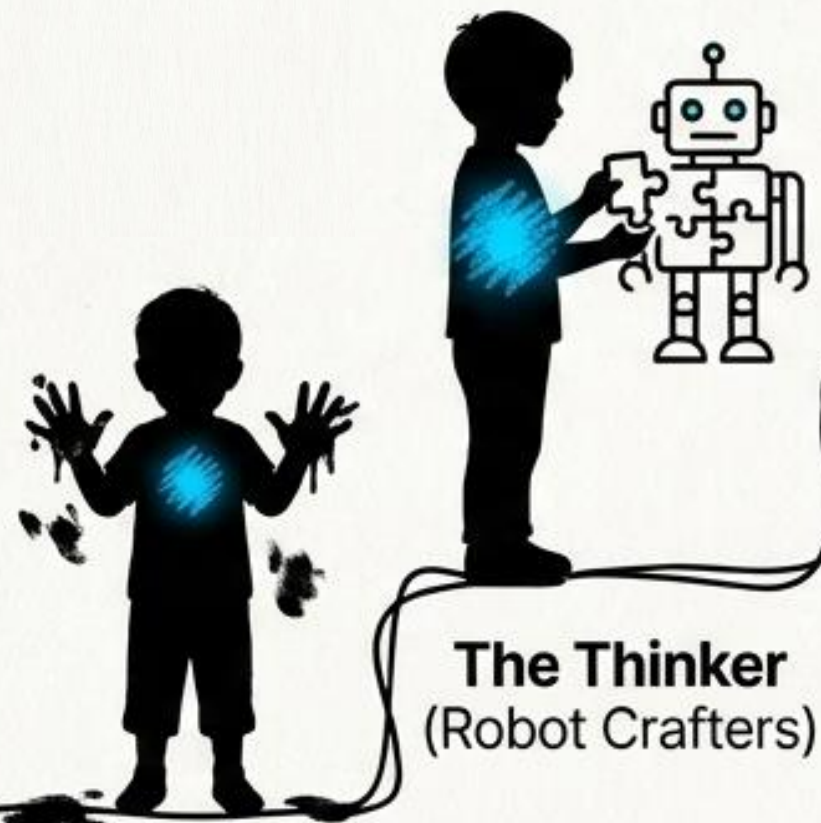

We are raising humans. The methodology has to be human too.

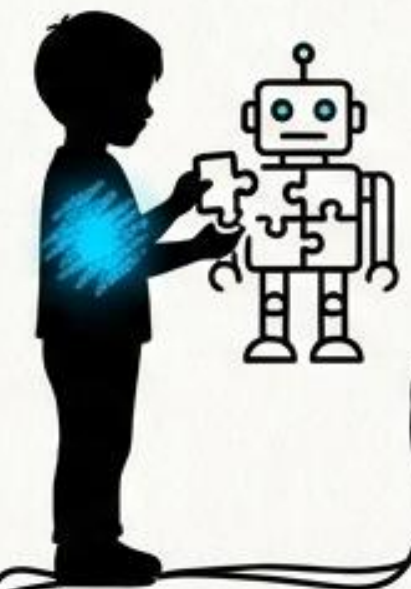

The Tokylabs Blueprint.

**We are not
running a
Hackathon
today.
We are
igniting
the future.**

Selamat datang,
Architects of Bali.
